

# What's the problem?

**Designing and building structures is a complex process.**

Building things is hard. Designing them is even harder. It takes years to become proficient at these disciplines in order to create simple and functional structures and every project requires countless hours and iterations before becoming something people can use.

# **Here's the solution.**

## **A simple way to design and build custom structures.**

Design and build simple or complex shapes, scale them up or down for your needs, preview what it will look like in real life, order parts, and assemble at home.
