

We are inherently creative.

Most of us learned how ***not*** to be creative. Let's reverse that and provide a tool anyone can use to rediscover their own creativity and make really useful things for their homes, schools, businesses, and non-profits. The world will be a better place when we all spend more time making things instead of consuming things.

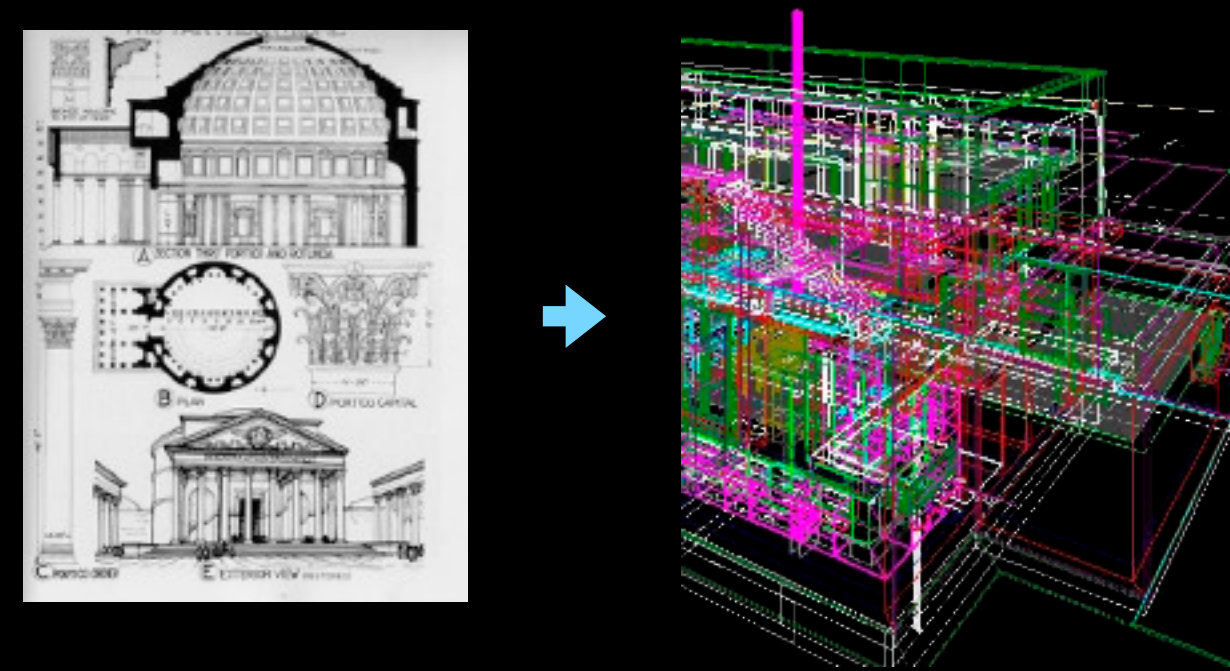

We've been making stuff since the stone age

However, our tools have changed dramatically.

Conceptualize

From cave walls, stone tablets, and paper to computers to word processors and note taking apps.

Design

From pencil and paper to computer aided design (CAD).

Build

From stones and hammers to power tools, CNC machines, 3d printers, and robotics.
