

So, what's the problem?

Designing and building has become a very complex process.

Design is difficult to get right. It takes years of education and practice to become proficient enough to create functional and beautiful things.

Building them is even more difficult. You need expensive tools, safety equipment, and space—not to mention years spent learning your craft.

And, the solution?

Make complex and powerful tools accessible to everyone.

Reduce the barrier to entry for many people who want to make useful things but aren't ready to commit to learning everything about designing and building things. There's no need to worry about rules, process, engineering, or manufacturing. We've thought of all that so you can focus on making the things you want.
