

What is it, exactly?

Simple—A design tool for building things a particular way and a service to order parts.

How does it work?

Design -> Order -> Assemble

Combine and edit 3d geometric shapes using our design tool that converts them into a special system of wooden rods and 3d printed connectors. It allows you to build anything from tiny sculptures to large outdoor structures like sheds or greenhouses. Once you've completed your design, you can order the parts and we'll ship them to you for assembly.
